This color coded, handy sized book is ideal to keep in the tack trunk, trailer or tack room, at your ready should you need to use it.

It contains all the necessary information to refer to when your horse or pony is in need of first aid. Color coded by type of emergency, it helps you determine the problem, and gives you directions on treating the condition, or at least stabilizing the animal until the veterinarian arrives. This new second edition provides completely updated material, as well as new sections on large animal rescue and splinting techniques. A must have item for any horse owner who is not a veterinarian.
